

Terms of Service.

The agreement between you and Pampalo for using an experimental, passkey-secured, client-side wallet.

Version v0.1 · Experimental · Draft — placeholder, not yet effective

Pampalo is experimental

This is a placeholder Terms of Service for an early, unfinished product. Pampalo's wallet code, its cryptography and its zero-knowledge (ZK) proof system are cutting-edge and **have not been independently audited**. We build with security best practice and careful design architecture — but the world is big and full of people trying to get at your data, and sometimes those people get through. Use Pampalo only with funds and information you can afford to lose. This document is a draft and will be replaced before any general release.

These Terms of Service (the “**Terms**”) govern your access to and use of Pampalo (the “**Service**”), an experimental web wallet. By clicking “Sign in with Passkey”, creating a passkey, or otherwise using the Service, you agree to these Terms. If you do not agree, do not use the Service.

In short: Pampalo is a research-stage tool offered as-is, without warranties, and you use it at your own risk. The sections below explain what that means in more detail.

1. What Pampalo is

Pampalo is a client-side-first wallet. Wherever practical, your data is created, encrypted and used on your own device. Pampalo stores only **encrypted** content on its servers so that your wallet can sync and recover across sessions; the keys needed to decrypt that content are derived through your passkey and are not designed to be available to us.

Pampalo also uses zero-knowledge (ZK) proofs to facilitate private transactions. ZK proof technology is powerful but, in this product, it is **extremely experimental**. It may contain bugs, may behave in unexpected ways, and may change or be removed entirely as the project develops.

2. Experimental status — no warranty

The Service is provided on an “as is” and “as available” basis, for evaluation and experimentation. To the maximum extent permitted by law, Pampalo disclaims all warranties, express or implied, including merchantability, fitness for a particular purpose, accuracy, and non-infringement. Specifically, we do not warrant that:

- the Service will be uninterrupted, timely, secure, or error-free;
- the cryptography, ZK proof system, or any other component has been audited, formally verified, or is free of vulnerabilities;
- transactions will complete, remain private, or be recoverable;
- any data — encrypted or otherwise — will be preserved, available, or free from loss or corruption.

3. Security — our commitment and its limits

The honest version

We do our best to protect you through security best practice and deliberate design architecture. But the world is big and full of bad people trying to get your data — and sometimes those people do get through. No system is perfectly secure, and Pampalo, being experimental and unaudited, is less proven than most.

We take reasonable, good-faith measures to safeguard the Service, including encryption of stored content and passkey-based authentication. However, you acknowledge that no method of transmission or storage is completely secure, that newly discovered vulnerabilities can affect even well-designed systems, and that experimental cryptography carries elevated risk. You use the Service with that understanding.

4. Passkeys and account access

Access to your Pampalo wallet depends on your passkey and the device or authenticator that holds it. You are responsible for keeping your passkey, devices, and authenticators secure. Because Pampalo is designed so that we do not hold the keys to your encrypted data:

- if you lose access to your passkey, we may be **unable to help you recover your wallet or its contents**;
- anyone who gains access to your passkey or authenticator may be able to access your wallet;
- we cannot reset, restore, or override your credentials on your behalf.

5. Assumption of risk

By using Pampalo you acknowledge and accept that, among other things:

- the Service is experimental and may fail, lose data, or be discontinued at any time, with or without notice;
- ZK proofs and related cryptography may contain flaws that compromise privacy, correctness, or funds;
- software bugs, key loss, third-party failures, network conditions, and hostile actors may all result in partial or total loss;
- you should only use the Service with value and information you can afford to lose entirely.

6. Your responsibilities

You agree that you will:

- use the Service only for lawful purposes and in compliance with all laws and regulations that apply to you;
- keep your passkey, devices, and recovery materials secure and under your control;
- not attempt to attack, overload, reverse-engineer for malicious ends, or otherwise interfere with the Service or other users;
- make your own independent assessment of whether the Service is appropriate for you.

7. No financial, legal, or tax advice

Pampalo is a software tool, not a bank, broker, exchange, or licensed financial service, and nothing in the Service constitutes financial, investment, legal, accounting, or tax advice. You are solely responsible for understanding and meeting any obligations — including reporting and tax — that arise from your use of the Service. Depending on where you live, the Service may not be available to you or may be subject to additional restrictions.

8. Limitation of liability

To the maximum extent permitted by applicable law, Pampalo and its creators, contributors, and operators will not be liable for any indirect, incidental, special, consequential, or exemplary damages, or for any loss of funds, data, profits, or goodwill, arising out of or relating to your use of — or inability to use — the Service, even if advised of the possibility of such damages.

Some jurisdictions do not allow certain limitations or exclusions of warranties or liability. Where that is the case, the disclaimers and limitations in these Terms apply to the fullest extent permitted, and nothing in these Terms is intended to exclude rights that cannot lawfully be excluded.

9. Changes, suspension, and discontinuation

Because Pampalo is under active development, we may add, change, suspend, or remove features — or discontinue the Service entirely — at any time. We may also update these Terms; if we do, the updated version will be made available through the Service, and your continued use after that point means you accept the revised Terms.

10. Contact

Questions about these Terms, or about a security concern, can be directed to the Pampalo team via the contact channel listed on the Pampalo website. As this is an experimental project, response times are not guaranteed.

Plain-language recap

None of this replaces reading the Terms above, but in short:

- Pampalo is an early, **experimental** wallet — expect rough edges, bugs, and changes.
- The cryptography and ZK proof system are **cutting-edge and unaudited**.
- Your data is encrypted and your passkey holds the keys — if you lose it, we likely **can't recover your wallet**.
- We follow security best practice, but **no system is perfectly safe** and attackers sometimes succeed.
- Use Pampalo **only with funds and information you can afford to lose**, and at your own risk.

Placeholder notice: this document is an early draft provided so the "Terms" link in the Pampalo interface resolves to something meaningful. It is not legal advice, has not been reviewed by a lawyer, and should be replaced with a finalised, professionally reviewed agreement before any public or production release.
